HR Manager

\$companyName

Dear HR Manager,

With a strong background in Java development and experience of 3+ years in designing scalable solutions, I am excited to apply for the Java Developer role at \$companyName. My expertise in microservices architecture, cloud technologies, and backend development makes me a strong candidate for this opportunity.

During my tenure at Lentra, I played a key role in developing and optimizing the Loan Origination System, enhancing API performance, and upgrading projects from Java 8 to Java 17. My experience in building secure and efficient software solutions, such as a password management system with bcrypt and AES-256 encryption, demonstrates my ability to create impactful applications. Furthermore, my contributions to the HDFC Easy EMI App significantly improved user engagement and revenue growth.

\$companyName aligns perfectly with my skills in Java, Spring Boot, Kafka, Hibernate, SQL, NoSql AWS, React.js, OCI etc. I am confident in my ability to contribute meaningfully to your team's objectives by developing high-performance, scalable solutions.

I would welcome the opportunity to discuss how my experience and technical proficiency align with the needs of \$companyName. Please find my resume attached for your review. I look forward to your response and appreciate your consideration.

Thank you for your consideration.

Best regards,

\$firstName \$lastName
